

10 Tips for At-Home Quarantine

Quarantine keeps someone who might have been exposed to the virus away from others.

If you have been directed to quarantine or self-monitor at home because of possible COVID-19 exposure:

1 **Stay home** from work, school, and public places for 14 days after last close contact with person who has COVID-19.

2 **Monitor for symptoms.** If you develop symptoms or a fever, contact your healthcare provider immediately.

3 **Get rest, stay hydrated, and exercise** if possible. Avoid locations where you may come into contact with others.

4 **Call your healthcare provider prior** to medical visits and inform them of your exposure to COVID-19.

5 For medical emergencies, call 911 and **notify the dispatcher** that you have been exposed to COVID-19.

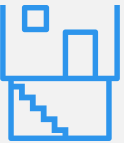

6 **Take everyday actions to prevent the spread of germs:**

- Clean your hands often with soap and water for at least 20 seconds, or an alcohol-based hand sanitizer that contains at least 60% alcohol.
- Cover your cough/sneeze.
- Avoid touching your eyes, nose and mouth.

7 **Stay in a specific room and away from other people in your home** as much as possible. A separate bathroom is also recommended.

8 **Avoid sharing personal items** with people in your household, like dishes, towels and bedding.

9 **Clean all frequently touched surfaces,** like counters, tabletops and doorknobs.

10 **Make the best of your time at home** by working remotely, reading, or other hobbies.
